

HANELLY™

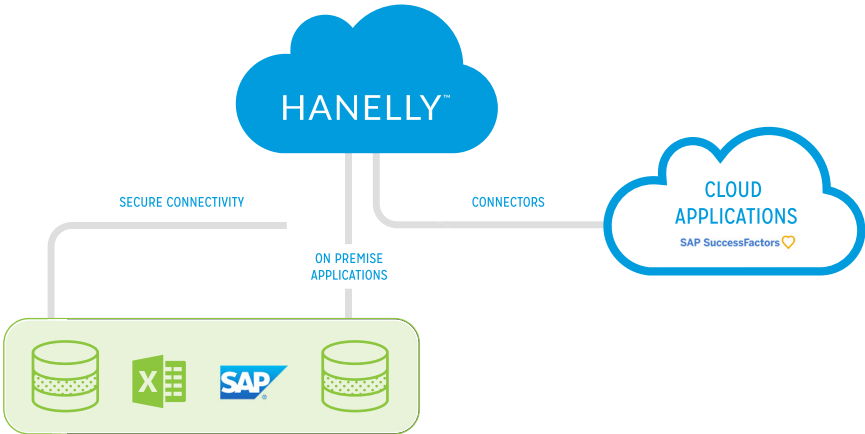

Seamless Integration. Accelerated Workforce Change.

AN ENTERPRISE SOLUTION

Enterprise businesses need access to dynamic workforce data in order to predict and plan for the future. Traditional solutions give only snapshots of your organization and lack the functionality to truly measure the impact of change in your business. HANELLY™ enables organizations to dynamically analyze and visualize critical metrics including layers, span of control, headcount and more. HANELLY™'s analytics functionality is combined with real-time modeling capabilities allowing organizations to track via multiple metrics

HANELLY™ leverages data directly from your HCM core solution. This enables business units, HR and team leaders to speak confidently about their business-critical metrics and plan for the future with confidence

INTEGRATE WITH YOUR HCM CORE SOLUTION

- HANELLY™ seamlessly integrates with your HCM core solution enabling real-time access to data immediately.
- Whether it's on the cloud, on premise, or a combination of both, HANELLY™ provides secure write-back and integration with your HCM core solution.
- HANELLY™ 's robust deployment options on the cloud are designed to ensure the highest level of data security.
- From user authentication to enterprise data, HANELLY™ offers various integration options to leverage your existing enterprise investments.

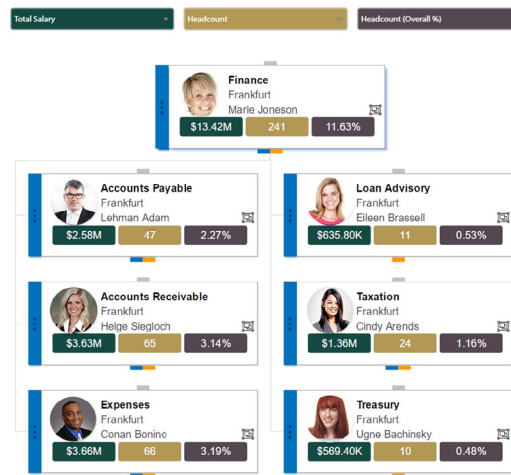

Powerful visualization and analytics: *transform your organization faster.*

Improve data quality and increase accuracy with data integration, and data auditing that clearly identifies errors in your HCM core solution data combined with safe and secure write-back of changes to your HCM core solution.

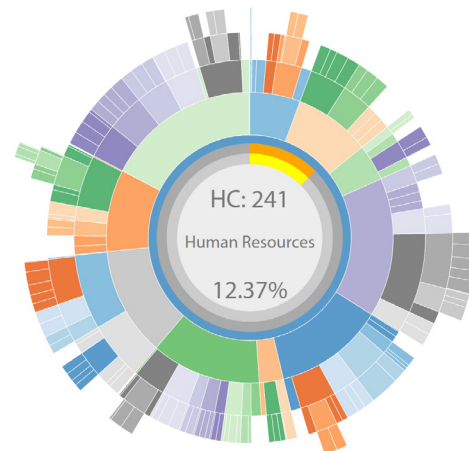

View your data from different angles with visual object comparison, dynamic filters, and multiple dashboards. Easily share and manipulate data to align your organizational structure with business objectives.

Visualize organizational health and quickly identify opportunities and risks with views of critical workforce data in highly visual dashboards. Using our extensive set of filtering options, data is dynamically updated empowering stakeholders by providing views of the organization from multiple perspectives.
